

Re: Ordering RJ31X Jacks & Telephone Lines

1. Monitored Fire Alarm Systems require 2 phone lines (dedicated only!) connected to two RJ31X Jacks.
2. These jacks MUST be installed where the Fire Panel is located. No other location is acceptable!
3. Have your individual phone company to perform this work.

Important Note: We recommend that you use Verizon for your lines, Comcast and other internet based lines MAY NOT be compatible with our equipment.

Thank You
